

Job Description - Product Operations Engineer Intern

What would you be doing?

- This role involves owning Product Operations responsibilities as part of one of Plivo's Product Teams.
- Responsible for product delivery on requirements for various business functions for internal and external customers.
- Manage relationships with Plivo partners/vendors and drive continuous improvement with them.
- Conduct regular business review meetings with Plivo partners / vendors and highlight issues and areas for improvement.
- Onboard new vendors/partners by owning the process end to end including technical, quality, and operational flows.
- Drive quality of product offering by constantly identifying, highlighting, and escalating any quality dips or issues observed internally or with partners/vendors.
- Maintain ownership of issues until resolved completely and show a high degree of customer focus.
- Understand technical concepts and issues and drive reliable technical solutions and a consistently exceptional service experience.
- Drive results on a number of key metrics by analyzing problem areas and proactively driving solutions.
- Identify repetitive operational workflows and leverage automation tools/scripts to improve efficiency, accuracy, and turnaround times.
- Collaborate with internal teams to design and implement process automations for partner onboarding, issue tracking, reporting, and operational monitoring.
- Drive operational excellence by proactively identifying opportunities to reduce manual effort through automation and workflow optimization.
- Build and maintain dashboards, automated reports, and alerts to monitor key operational and quality metrics.

Who would be the right fit?

- Good technical aptitude to ramp up on technical and business concepts.
- Must have excellent verbal and written communication skills in the English language.
- Demonstrable problem solving and troubleshooting skills, logical thought process.
- Business data analysis and good skills in tools such as MS Excel and Google sheets.
- Working knowledge of SQL is preferred.
- Good to have an understanding of commerce platform concepts and procedures including online services, general billing, and commerce systems processes (e.g., invoicing, credit card transactions).
- Interest in process automation and workflow optimization using low-code/no-code tools, spreadsheets, scripting, or APIs.
- Basic understanding of automation concepts and data workflows is a plus.

What's in it for you

As part of the Platform Product Operations team, you will gain first-hand exposure to the nuances of the global telecommunications industry and develop a deep understanding of how large-scale communication platforms operate. Within a short span of time, you will work on real business-critical workflows, partner operations, and customer-impacting processes – enabling you to become a strong subject matter contributor.

You will also get the opportunity to:

- Work closely with international customers, vendors, and cross-functional teams across product, engineering, and operations.
- Learn how large-scale operational systems are managed, monitored, and optimized in a highly regulated global environment.
- Build hands-on experience in process automation, operational analytics, and workflow optimization using modern tools and technologies.
- Develop problem-solving, stakeholder management, and data-driven decision-making skills in a fast-paced product environment.
- Contribute directly to initiatives that improve operational efficiency, service quality, and customer experience at scale.
